

Managed Integration Services for the Logistics Industry

Enhance interoperability and data sharing with fully managed integration solutions

Youredi's integration platform (iPaaS) is a facilitator for creating connectivity across all internal and external stakeholders in the supply chain to enable real-time information sharing. We simplify how you transfer and receive messages by creating connections across any systems and applications, transforming data formats, or validating and enriching messages as a managed integration service so that you can focus on your core business.

Connectivity Management

With the help of Youredi's managed integration services, you'll be able to create connectivity with all your trading partners. Whether you use on-premise legacy technologies or cloud-based applications, our platform can tackle even the most challenging hybrid integration scenarios.

Data Integration

Real-time data exchange is a prerequisite for better collaboration across trading partners. Youredi's solutions also take care of the data translation before loading the information to its destination. We can work with any format: proprietary in-house formats, EDIFACT, X12, JSON, etc.

Data Quality Management

If you request, we can set up data validation and data enrichment rules as part of the integration solution. This way you will ensure that the messages you receive always contains all necessary information without manually checking them for errors.

APIs

Besides adapter technologies, we also help you with developing, managing, and monitoring your APIs. APIs have become essential building blocks of integration solutions, as they speed up and simplify the connectivity across B2B partners.

Business Process Integration

Integrating business rules allows you to automate business processes so communication between different interfaces and databases will happen much more smoothly. Business process integration removes specific manual processes, so your operations will be more efficient.

Modern EDI

Using a cloud-based integration platform for EDI can help to modernize your processes. You'll be able to connect to any systems and applications, and you can utilize features such as connecting to APIs, data translation, data integrity improvements, or process automation.

About Youredi

Youredi provides fully managed B2B integration services to enterprises of all sizes developed and deployed on top of Youredi's integration platform as a service (iPaaS). Youredi has a global presence with offices in Helsinki, Finland and New York, USA. More information: www.youredi.com
